# EaseUS Tunes Data Recovery Wizard v9.8 for Fast, Smooth and Successful File Recovery Process

EaseUS announced the official release of Data Recovery Wizard v9.8 coming up with Black Friday & Cyber Monday shopping frenzy. Adjusting analytical algorithm of partitions, speeding up NTFS partition deep scanning and user-friendly UI redesign for better experience work as a guarantee for rapid, easy and sound recovery results through 9.8 version.

EaseUS specialized in data recovery, backup and disk management utilities is absorbed in the efficiency and effectiveness of flagship product – Data Recovery Wizard v9.8 in data security technology. This trouble-shooting data recovery strategy gives rise to the preciseness of tracking down and recovering lost files, mission-critical documents or sensitive data with improvement on analytics capabilities through adjustment in partition algorithm which can render more hard drive partitions traceable to retrieve more lost programs. By in-depth research in partition scheme where lost data resides in, EaseUS team lifts the recovery quality to a higher level to solve different data loss risks under harsh environment with minimal IT sources.

In the point of disk usage quotas and performance, NTFS (New Technology File System) takes advantage over other partition file system. Different file systems maintain their own specific logical data structures. File recovery process can be briefly described as drive or folder scanning to find deleted entries in Master File Table (MFT) then for the particular deleted entry, defining clusters chain to be recovered and then copying contents of these clusters to the newly created file. The more chances that partition scanning – a checking process of hard drive costs a large amount of time may also consume the confidence to get lost data back especially for severely damaged data. It conforms that EaseUS v9.8 data recovery tool has cut down NTFS partition deep scanning time to an extreme extent to detect lost files in practice. As for RAW recovery, more corrupted data can be found exactly.

Unique UI design makes the whole data recovery procedure easier and more convenient in few simple steps while comforting users' anxiety of data loss. Real time log is an access to examine recovering progress. For various data loss scenarios, this 9.8 deleted file recovery tool offers a clear and effective solution to save lost data at fleeting speed and with security.
