EaseUS Announces Official Release of Partition Master 11.0 That Keeps PCs/Laptops/Servers Running at Best

EaseUS 11.0 partition management solution is mainly designed to optimize PCs/laptops performance, take full advantage of disk space for what matters most and keep all data or even system secure. Partition Master 11.0 makes it much simple and smooth to create WinPE bootable media for system migration coupled with intuitive user interface.

Top award-winning partition manager software, Partition Master maximizes hard drive usage through a stream of operations, resizing, merging, creating, deleting and splitting disk partition when there is no much room for a mass of data or applications. Information increasingly expands in the digital world that large storage space is required for safekeeping. Efficient disk management contributes to data security and premium PC performance.

Except for major updates on primary managing features, the 11.0 version cleans up junk files easily, speeds up computers and keeps PCs run fast and healthily as a routine maintenance. Junk files or programs are inevitable in computers daily working. Regular cleaning protects PC from outage and leaves much space for important files.

Meanwhile, EaseUS partition managing software allows to keep track of large files that takes most memory space for further transferring or sorting. Used data can be wiped out to save much space. Besides, disk defragmentation repairs file fragments and improves hard drive capability.

Especially for Windows 10 installing, migrating previous operating system to HDD/SSD is effective to solve low disk space problem. Usually system disk occupies crucial part of hard drive while most users get used to storing information on it without extra concern. Transferring system to larger HDD/SDD is to protect hard drive and system from destructive failure. What's more, it's quite critical to create 64bit WinPE bootable media and get system restarted again quickly where Partition Master works well when system crash occurs.

EaseUS redesigns the 11.0 partition managing software user interface to simplify routine disk management. Highlighted core features in common use are obvious for easy operation.
