DIABETES A CRITICAL ILLNESS

Diabetes is a chronic autoimmune disease that attacks the pancreatic cells that produce insulin. Insulin is used to process glucose in our energy supply to power our cells.

Diabetes affects 60 million of Europeans. More than 1500 new cases are diagnosed each day in Europe. If treatments exist to properly treat the disease, treatment adherence is essential, and binding and no respite is permitted.

The material and processing are bulky, impressive, visible and impose strict hygiene rules and conditions of carriage. Insulin neither supporting nor freezing temperature rise, it becomes imperative to have suitable equipment for organizing everyday.

BE ORGANIZED IS ESSENTIAL

Daily, an insulin-dependent diabetic with a minimum of 10 appointments with the management of his disease. 6-8 blood sugar checks and 4 insulin injections punctuate the night and day. Adherence should be regular because it is vital.

It becomes imperative to organize the care pathways to ensure the frequency of the adherence of the treatment

If diabetics are trained in their diabetes center to guide them in achieving their care in their diet, the organizational difficulties are many and start at home.

MABOX is an organizer pouch that guide the patient and allows him to immediately identify what he has to do.

SITUATION

422 million diabetics worldwide
> 500 000 Kids DID
60 Million in Europe
including 7 Million insulin-dependent DID

THE RISKS

A chronic disease that binding
For children and adults

One of the main causes of disease
cardiovascular, renal, of blindness
and leading cause of amputation

Deep distress because the disease is
24h / 24h stigmatizing and difficult to manage

THE TREATMENT

The treatment against diabetes is so eavy
It imposes Glucose Controls &
Daily iInsulin Injections

A balanced diet and activity
Regular physical are required

A good organization of care helps
to improve adherence & glycemc control

MABOX was designed by a young diabetic disconcerted before so much material, needles, insulin, reader, book ...

A French patent validated in 4,000 patients with diabetes.

More than just a cooler pocket, MABOX is a convenient and effective tool, recommended by the education centers in diabetology.

All successive stages of diabetic care courses, including control glycémie and injection of insulin steps were decomposed and analyzed to organize a simple and logical progression,

Cover was designed in the order of these combos. Each location is a precise and logical step of treatment. A design validated by healthcare professionals and patients with diabetes!

Perform care by following these 3 steps is accessible to all and without any difficulty. The patient immediately visualizes the right accessory to use and meets the hygiene rules.

The material is available and prominently, A well-guided patient is a patient which improves the quality of its observance.

1 Control Blood Sugar

The reader fits in the outer pocket. It is available immediately and without having to open the entire bag. The self-monitoring book is also easily accessible.

2 Insulin Injection

The patient takes a Newfoundland needle in the Box Black spotted a New Needle logo and insulin pen in the specific isothermal compartment. He directed his injection.

3 End of care - Post Injection

The patient may store the used needle into the Red Box marked with a crossed needle. It rests his pen in its compartment.

The organization of material advantages:

Direct Access to care = Stress Reduction

No confusion Hardware Security =

Hygiene about Unique needle use.

MABOX IS ESSENTIAL AND SPECIALLY ADAPTED HOUSE TO ALL USE. CONTAINS UP TO 30 DAYS FOR PROCESSING AND CANNING INSULIN COOL UP TO 12 HOURS

EACH ACCESSORY IS STORED IN A SUITABLE LOCATION TO GUIDE THE PATIENT

SPECIFIC LOCATIONS ISOTHERMS FOR INSULIN PEN & BOTTLES INSULIN PUMP KIT GLUCAGEN, CATHETERS, TANKS, NEEDLES & NEWLY USAGEES, GLUCOSE PLAYER, BOOK, SUGAR, ORDNANCE ...

MABOX REPLACE THE MEDICINE CABINET OF DIABETIC WITH AN ORGANIZATION ADAPTED TO CARE.

Les Aiguilles neuves sont stockées dans la Box Noire repérée d'un logo Vert. Elles sont facilement accessibles grâce à une large ouverture.

La Box Rouge est réservé au stockage temporaire des aiguilles usagées.

Celui-ci se vide facilement dans un collecteur spécial déchet type DASRI.

THE INSULIN AS EFFECTIVE AS FRAGILE
ULTRA SENSITIVE TO HEAT AND COLD

TRAVELLING AND DIABETES IS POSSIBLE!
PLANE, TRAIN, BUS, CAR, WORK, HOLIDAYS ...

Insulin does not support frost or high temperatures above 30 ° C, one of the significant innovations of diabetes MABOX pouch, it is the isothermal storage for transporting insulin to ideal temperatures between 2 8 ° c as required manufacturers. Fini insulin transported in coolers and other makeshift bags originally designed to carry frozen.

Excellent specific thermal insulation to keep insulin under the conditions recommended by the laboratories. The case MABOX Diabetes is the compromise between isolation and robustness. To avoid thermal bridges, insulation foams were placed in strategic locations.

Travel safely and finally possible with the MABOX pouch. With longer battery insulin Conservation fresh, up to 12 hours between 2 and 8 ° C, Travel safely from Paris to New York.

Authorized aircraft cabin, MABOX is a secure transport solution "all in one", the various functions and product innovations are designed to accompany the person with diabetes every day and help reduce stress, aggravating the disruption of blood glucose.

Supplied with 1 shoulder strap, 1 card "I Am Diabetic" 2 Cold Gels NF - Weight: 1.2kg - Dimensions: 21 x 29 x 7 cm
Available in 3 colors: Red - Black - Blue

MABOX the pouch also includes insulated storage for insulin pens, insulin pump and refill bottles GlucaGen kit.

They are cooled by 2 Coldpack MABOX comply with Health standard 99 S 700.

The Coldpacks MABOX ensure perfect reproduction of the cold, steady and progressive. They are exclusively manufactured in France by the company for OPTIMIZ Kalibox leading Pharmaceutical Packaging Isothermal.

QUALITY CONTROLS

The Isothermal pockets MABOX comply with French standards and European directives.

The isotherms Performance MABOX pockets are certified ISO 17025 accredited laboratory for transport of insulin in cartridges or pens, Meets Standard NF health sector requirements S 99-700

The unique design of MABOX pockets is patented by the National Institute of Industrial Property. To protect users from risks of counterfeit products, models and brand MABOX diabetes are registered with the INPI.
